

Proceeding in Speculative Complete Victory – Imagining EGS

By Shomit Sirohi

I. Cahiers

Went like a short life, didn't read this stuff, but practiced it. Was then depressed, or bureaucratic about life which is so grey becoming dull, which means Hegel after all, and all his dullness – with Sirohi there is life, Torah women to join us. We bet he predicts in praxis but we need divine spiritual attitudes as Cornel West claims it needs a psychoanalyst in praxis to give us our Incontinence by Sirohi.

II. Surreal Numbers as Metaphor of Cahiers – Formalism, or formalization, with Hegel finally, and German Idealism or simple such things.

Be surreal, I argue. That is my contribution. Imagine a lecture in performatives, I add be surreal.

Lacan I predict (how is simple integration or in fact speculative judgement which is here in Encyclopaedia – performative, reading as phenomenology which turns on the speculative non-co-incidence of opposites in Hegel, like la-langue and normal language, in Sirohi mathematical same – like normal language with a lift of the cuff of the hand – tonalism).

Prediction is finally totalised in intentional force as – you have arcs which proceed to in fact developing ideas which are like a cycle in Beckett which is ridden in elliptical senses and there can be falls till the arc is satisfied like in fact the process itself. Absolute knowing, that other meaning of daily life and phenomenology.
